

SMURFIT RECYCLING TAKES CONTROL WITH REGENERIST ERP SOLUTION

Cedilla Systems implements REgenerist at Smurfit Recycling

01 August 2005, Manchester: Çedilla Systems, specialists in waste management software and Microsoft Gold partner for Business Solutions, has announced that Smurfit Recycling, a major UK paper recycler will be implementing its REgenerist solution, one of the most comprehensive and technologically-advanced ERP (Enterprise Resource Planning) software solutions available for the recycling sector.

Smurfit has a long established history and has grown organically from a company collecting 7000 tons of paper by horse and cart in 1919, to a technologically advanced and efficient modern day enterprise, handling substantial volumes of recovered paper. The new ERP solution is expected to result in significant efficiency gains, by removing the duplication of effort and manual processes for its numerous employees.

Gary Large, General Manager at Smurfit Recycling said: "REgenerist will support processes across the entire company from end-to-end, improving access to more timely, accurate and appropriate information. Employees will benefit from the fully customisable, graphical user interface, which will present role-specific information to them in an easy to use and intuitive format."

The 30 user REgenerist system will be implemented across the organisation's nine sites within the UK and will manage key processes including accounts and finance, paper collection, disposal, commitments and transport. It will be implemented in five phases and is expected to be fully live by December this year.

Jason Fazackerley, Business Development Director at Çedilla Systems, stressed the importance of having an integrated system for recycling businesses. "We are delighted to be working with Smurfit on this project. There are significant efficiency gains to be had from using REgenerist. It automates many processes that are currently taking up valuable resources because they do not work together. We hope this might be the start of a long-term relationship."

ENDS

Notes to Editors

About Smurfit Recycling:

Since their inception in 1917, when all paper collections were made by horse and cart, the business has grown from handling 7000 tons to more than 600,000 tons per annum, and from a workforce of 28 to 240 employees.

Continued investment in the latest recycling machinery, combined with a comprehensive fleet of vehicles and range of collection systems, enables Smurfit to cater for all requirements, no matter how large or small. They presently cater for a diverse customer base, which includes major supermarket chains, high street retailers, corrugated plants, national newspaper printers, tissue converters, local authorities and offices.

About REgenerist:

REgenerist is an ERP software solution powered by Microsoft® Business Solutions Navision, and has been implemented at over 50 organisations throughout Europe. REgenerist is one of the most technologically-advanced ERP solutions available today for waste management and recycling business, and is sold and supported in the UK and Ireland by Çedilla Systems. Çedilla is a Microsoft Gold partner for Business Solutions, staffed by certified professionals dedicated to providing customised solutions, training and support services. Çedilla's success has been built on the powerful Navision software range, an ERP software package from Microsoft Business Solutions which is sold and supported in 108 countries worldwide.
